

LPG 0HP

VCA and Low Pass Gate module

- IN : insert audio
- OUT : output
- CV : insert CV to trigger the VCA or open the LPG
- Flavour: Select between 3 different filter flavours when the switch is set to LPG
- VCA/LPG switch: switch to desired mode VCA or LPG

If you are in need for an extra VCA in your setup or a filtered percussion sound then this is your thing. Vactrols are selected when building the LPG 0HP to fit both Buchla and other systems.

For systems with only banana jacks you will need to connect the module to ground via the BROWN banana on the side.
